

ONE-STOP DEFI SYSTEM ON TRX

## What is N1Swap

N1Swap is a decentralized Defi system deployed on TRX.

We found that there are numerous DeFi systems on ETH and the top 10 all have over \$1 billion in locked positions; we found that DeFi systems do not appear to be strong because after most of the money is invested in a particular DeFi, as the yield drops, so the lower ranked DeFi is also quite attractive.

# What is N1Swap

On TRX, which has cheap fees and has issued over \$14 billion in USDT, we felt that there could be a lot of new opportunities for DeFi on TRX, and thus N1Swap was born.

We identified a number of pain points and opportunities for DeFi systems.

- Curve.fi's algorithm is better suited for stable coins (lower slippage), while Uniswap's algorithm is better suited for general coin trading.
- Complex system design can be a bad experience for novice users, so we want to make the system simpler and easier to use, for example by offering single-currency deposits.
- Bringing more valuable assets (ETH, BTC) and other mainstream assets into TRX will help the development of the Defi ecosystem on TRX.

We borrowed from current well known Defi systems such as PancakeSwap, Uniswap, Curve, etc. We designed N1Swap and we hope to provide a one-stop Defi solution.

# N1Swap Versions

The goals of our vision are divided into three main parts.

To provide basic trading and treasury services.

To provide other basic services of DeFi.

To issue more stable coins on TRX , Like BTC, ETH, USDT.

# N1Swap Versions - Provide basic trading and financial services

## 1. Provides DeFi's decentralized trading system.

- Uses the N1Swap algorithm with lower slippage in stable coin pair trading.
- Uses the Uniswap algorithm in other trading pairs.
- Provide a simpler single-currency deposit service (automatically converted and deposited by the contract) .

## 2. Provide Yield Farming service.

- Provide a service of Yield Farming to help users to manage Defi and get higher returns.
- All trading strategies will be voted on by the community.
- Strategy providers will receive 5% of all mining profits.
- Provide an excellent UI statistics page for users to view and monitor their earnings.

## 3. Provider community autonomous token N1S.

- Mining more N1S by pledging N1S and other cryptocurrencies.
- Owners of N1S can conduct a community vote based on the number owned to ensure the project is fully autonomous by the community.

# N1Swap Versions - Provide basic trading and financial services

We use the N1Swap algorithm with lower slippage between stablecoins such as USDT/USDJ. Our algorithm offers lower slippage and simpler calculation process compared to Curve.

$$y = \sqrt{\frac{50}{16} - (x + dx - \frac{7}{4})^2} + \frac{7}{4}$$

The algorithm of Uniswap is used for trading between non-stable coins.

$$XY = 1$$

# N1Swap Versions

- Provide Defi's other basic services

## IFO service

We use the N1Swap algorithm with lower slippage between stablecoins such as USDT/USDJ.

## N1S Timing-Redpacket

We use the N1Swap algorithm with lower slippage between stablecoins such as USDT/USDJ.

# N1Swap Versions - Issue more stable coins on TRX , like BTC, ETH, USDT

We think that the introduction of more assets on TRX will promote the growth and use of TRX in the long run. So our bigger vision is to help introduce more cryptocurrency assets to the TRX and in doing so promote N1Swap's own growth.

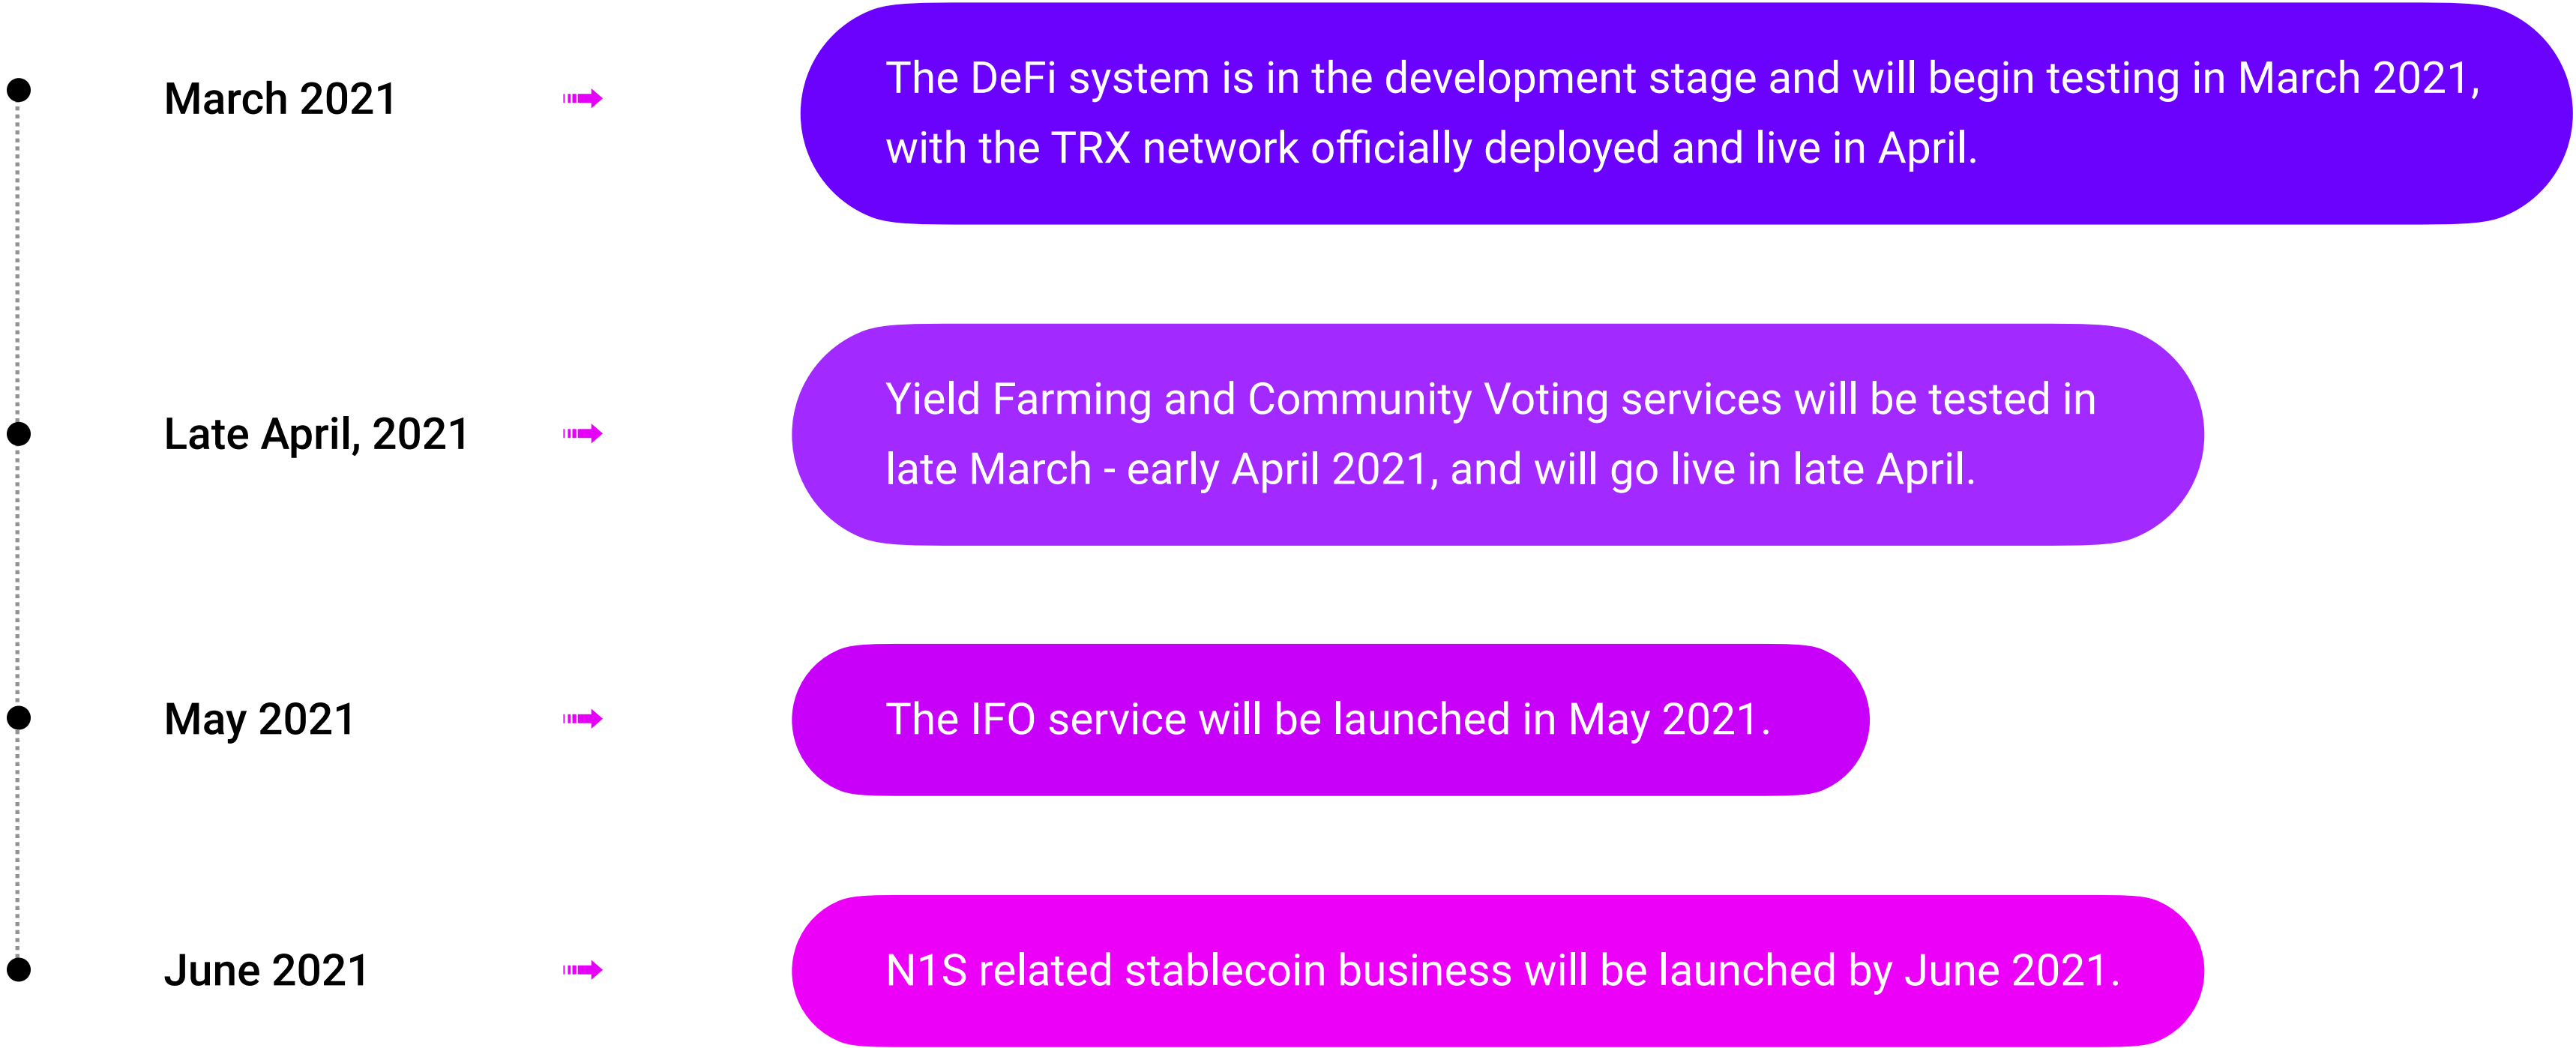

We will use the DAI coin scheme to introduce more cryptocurrency assets, using smart contracts to provide pledged TRX to generate N1-BTC, N1-ETH services. Similar to the DAI and USDJ solution.

- The pledge rate can be guaranteed by pledging more TRX when BTC is up for TRX, which can further promote the use and purchase of TRX.
- Each issued N1-BTC has sufficient pledge rate, so there is no need to worry about the price anchoring of N1-BTC.

# N1Swap Milestone

# N1Swap Token

N1Swap will be fully autonomous by the community and the big goal is that we will reward early participants with more tokens.

No pre-mining, no airdrops, completely fair launch.

We also believe that the development team should be rewarded with tokens for their development efforts, and our distribution plan is as follows.

	N1S
Community Foundation	10%
Development Team	25%
Advisors and early stage investors	5%
Mining	60%

- 1. N1S tokens for the community, development team, advisors and early investors will be unlocked linearly over 2 years.
- 2. The locked-in mining portion will be decreasing by  $\sqrt{2}$  per year.

# N1Swap Token

The initial mining of N1S generates a supply of 10 million tokens, and over time, the decreases each year by  $\sqrt{2}$

The profit by the system will be used to purchase and burn N1S tokens.

THANKS  
FOR  
YOUR  
TIME.
